

## DIRECTIONS:

Colouring/Bleaching/Nanoplasty/Brushing, and Hydration:

- Before the beginning of the procedure, for an already damaged hair (rubberised/elastic/brittle/fragile...); In a clean hair, with the hair slightly humid, Spray **20 in 1** thoroughly through the entire hair, use a comb to pull the product through the entire length of the strands, cover well, leave for 5-10 minutes, do not rinse, and continue with the procedure as usual.
- At the end, for a Colouring/Bleaching procedure; After washing the hair and removing the entire dye/bleach, remove the excess water from the strands with the aid of a dryer or towel, Spray **20 in 1** thoroughly through the entire hair, leave for 3-5 minutes and rinse the excess. Apply a small amount of **Leave-in Floractive** of your choice and finish as desired.
- During a Nanoplasty procedure, after the 1 hour pause, rinse the excess product from the hair, try to leave around 20% of the Nanoplasty on the hair; Dry the hair completely. However, before getting the hair 100% dry, when the hair is still a bit wet, slightly Spray **20 in 1** on the hair (5-6 sprays) and comb or brush the hair aiming to distribute the **20 in 1** evenly, then dry the hair completely, and proceed with the Iron Step.
- At the very end, for a Nanoplasty procedure, after flat ironing the entire hair, in the washbasin, wash the entire hair using a **Floractive Conditioner** of your choice. After removing the excess water from the strands with the aid of a dryer or towel, Spray **20 in 1** thoroughly through the entire hair, leave for 3 minutes and apply a **Floractive Mask** of your choice. Rinse everything and dry the hair completely.

**SIZES & EFFICIENCY**  
**300mL = 450 sprays**
